ABOUT US

GTurbo is proudly Australian-owned and operated. Our turbochargers are designed and manufactured at our Balcatta facility in Western Australia.

Our story begins with founder Graeme Bentink, an avid explorer of Australia's rugged landscapes, who struggled with the limitations of an underpowered and inefficient 4WD.

Convinced his factory LandCruiser had untapped potential, Graeme used his background in process engineering and metallurgy to create a solution: a high performance turbocharger built for real-world conditions.

Fourteen years on, GTurbo has grown into one of Australia's leading manufacturers of high-performance diesel turbos and tuning solutions. Fuelled by a passion for performance, we engineer, test, and optimise every product to deliver maximum power and reliability for every drive.

**DRIVEN BY INNOVATION AND BACKED BY ENGINEERING
EXCELLENCE, WE FOCUS ON THE ENTIRE SYSTEM TO BRING
YOU GREATER POWER OUTPUT WITH EVERY UPGRADE.**

OUR TURBOS

**ENGINEERED
BY DESIGN**

**BUILT ON THE FOUNDATION
OF FACTORY-FITTED UNITS,
OUR TURBOCHARGERS ARE
COMPLETELY REIMAGINED
USING CUTTING-EDGE DESIGN
PRINCIPLES TO MEET
MODERN PERFORMANCE
DEMANDS.**

All GTurbo turbochargers are balanced using state-of-the-art, four-stage high-speed equipment, spinning at up to 200,000 RPM.

We use a proprietary GTurbo balancing procedure that delivers levels of precision far beyond any original turbo we've tested. This advanced balancing ensures quiet operation, exceptional reliability under extreme boost, and, most importantly, long service life. Each GTurbo is race-ready straight out of the box, with no need for extra tuning or preparation, giving drivers the confidence to push performance to the limit from day one.

**OUR COMPREHENSIVE REDESIGN DELIVERS MORE POWER,
GREATER EFFICIENCY, AND ENHANCED RELIABILITY UNDER
HIGH-DEMAND CONDITIONS, THROUGH IMPROVED AIRFLOW,
SUPERIOR MATERIALS, AND ROBUST CONSTRUCTION.**

1 Turbine Shaft

Larger and stronger, with advanced blade metallurgy.

2 Compressor Wheel

Precision billet aluminium or titanium, point-machined for uncompromised accuracy, far superior to line-machined alternatives common in the market.

3 Bearings

Reinforced to handle high boost with gapless seals for superior oil control.

4 Boost Capability

Rated over 40psi, ensuring durability even under over-boost conditions.

5 Variable Nozzle Technology (VNT)

Precision-controlled VNT for rapid spool, consistent boost delivery, and unmatched throttle response.

GTURBO & **THE 1VD-FTV**

The Toyota 1VD-FTV 4.5L twin-turbo V8, found in the VDJ200 Series LandCruiser (2007–2021), comes equipped from factory with two compact IHI variable geometry (VNT) turbochargers. While efficient for stock performance, these turbos are limited in airflow and responsiveness at higher power levels.

To overcome these limitations, GTurbo has engineered a range of direct-fit turbo upgrades, fully redesigned from the inside out. Though externally visually similar these units retain only the shell of the original. Internally, they feature upgraded compressor wheels, thrust systems, turbine shafts, and reworked VNT components to handle significantly more power and boost with ease.

The IVD-FTV has proven incredibly robust under significant power increases. In 2012, GTurbo released the world's first true V8 upgrade for this engine, featuring a redesigned compressor wheel, thrust bearing, turbine shaft, and variable nozzle system. Our initial development vehicle has since clocked over 80,000km of high-load use, operating at 70%+ above factory power without a single reliability issue.

Today, our customers are achieving over 365rwkW, with massive low-end torque, enhanced drivability, and no fuel economy loss—more than double the factory output, while maintaining everyday usability.

Following the retirement of our VDJ79 in 2018, GTurbo's 2008 VDJ200 has been the benchmark for pushing the IVD platform. The VDJ200 has proven itself as an exceptionally reliable platform, winning multiple championships and consistently performing at the top of its class."

Over the seasons, the engine and turbo
system maintained **100% reliability**

PRODUCT GUIDE

FOR THE 1VD-FTV PLATFORM

TURBOCHARGERS

VDTT-G380 Titan

T T 1VD-FTTV S2B

Description

Delivers rapid spool and strong low-end torque, perfect for touring and responsive everyday performance.

\$6490

VDTT-G450 Titan

T T 1VD-FTTV S3B

Description

Combines sharp response with massive midrange power, ideal for heavy towing and high-output builds.

\$6490

VDTT-G450 Titanium

T T 1VD-FTTV S4B

Description

Engineered for maximum boost and top-end performance, delivering extreme power for serious builds.

\$7980

VDTT-G380 TITAN

STAGE 1: TURBO UPGRADE

MID-RANGE PUNCH | REAL-WORLD PERFORMANCE

The GTurbo VDTT-G380 Titan is the latest evolution of our twin-turbo upgrade for the 1VD-FTV-powered 200 Series Landcruiser. Designed as a direct bolt-in upgrade, they deliver instant throttle response, strong mid-range torque, and improved top-end power, perfect for sustained touring, towing, or high-performance builds.

PRICE **\$6,490** (PAIR)

Key Features

The VDTT-G380 Titan features a high-efficiency billet compressor wheel finished in our signature TITAN coating, an aerospace-grade treatment, engineered for ultra-low friction, extreme heat resistance, and long-term reliability.

GTurbo's VNT system for the VDJ200 is built for reliability in extreme conditions, with upgraded metallurgy for superior heat resistance and creep strength. A ceramic surface treatment boosts durability and ensures smooth, consistent actuator movement, solving the factory vane-sticking issue.

The updated turbine and compressor aero, matched with custom high oil flow bearings and a low-inertia design, deliver faster spools and smoother airflow across the entire rev range.

Performance Expectations

The VDTT-G380 Titan delivers efficient boost from 16-36psi. When tuned correctly, with supporting mods, customers can expect up to 30psi from 1700, 36psi from 2000-3000rpm and maximum 30psi at 4000rpm.

Product	Torque (Nm)	Power (rwkW)
Stock VDJ200 Series	550	155
VDTT-G380T + remap	800-900	220-240
VDTT-G380T + supporting mods*	1000	280+

*Supporting Mods = GTurbo Airbox, intercooler or GTurbo fan kit, 3" exhaust, high-flow injectors

Note: These performance figures are based on a turbo-back exhaust system. Retaining the DPF will slightly reduce output.

The dyno graph below, reflects real-world performance of the VDTT-G380 Titan on a VDJ200 Series Landcruiser.

VDJ200 -TUNE /AIRBOX /EXHAUST : Power(kW) & Torque(N-m) VS Engine Speed(RPM)

VDTT-G450 TITAN

STAGE 2: TURBO UPGRADE

SUPERIOR TOP-END POWER | DEMANDING DRIVES

The VDTT-G450 Titan is built for those chasing big power and torque in the upper rev range. Designed as a twin-turbo upgrade for the 1VD-FTV V8 in the 200 Series LandCruiser, it delivers explosive acceleration and relentless top-end performance, ideal for heavy-duty touring, high-speed overtaking, and performance-tuned builds.

PRICE **\$6,490** (PAIR)

Key Features

The VDTT-G380 Titan features a high-efficiency billet compressor wheel finished in our signature TITAN coating, an aerospace-grade treatment, engineered for ultra-low friction, extreme heat resistance, and long-term reliability.

Each unit features anti-surge slots in a revised compressor cover to eliminate the surge issues found in the factory turbos around 22psi, enabling aggressive tuning with confidence.

A 4340 chromoly high-flow turbine and our High Flow VNT system work together to improve boost response and flow at high RPM, while the upgraded thrust and main bearings ensure durability under sustained load.

Performance Expectations

The VDTT-G450 Titan delivers efficient boost from 16–38psi. When tuned correctly with supporting mods, customers can expect up to 30psi by 1850rpm, 38psi from 2000–3000rpm, and a maximum of 34psi at 4000rpm.

Product	Torque (Nm)	Power (rwkW)
Stock VDJ200 Series	550	155
VDTT-G450T + remap	850-900	230-240
VDTT-G450T + supporting mods*	1100-1200	320-330

*Supporting Mods = GTurbo Airbox, intercooler or GTurbo fan kit, 3" exhaust, high-flow injectors

Note: These performance figures are based on a turbo-back exhaust system. Retaining the DPF will slightly reduce output.

The dyno graph below, reflects real-world performance of the VDTT-G450 Titan on a VDJ200 Series Landcruiser.

VD-G450 TITANIUM

STAGE 3: TURBO UPGRADE

SUPERIOR TOP-END POWER | DEMANDING DRIVES

The VDDT-G450 Titanium is our top-tier twin-turbo upgrade for the 200 Series Landcruiser, built to handle the harshest conditions with more strength, more boost, and more top-end performance. This turbo offers increased durability, improved thermal stability, and the ability to push further, ideal for customers chasing the absolute limit of the IVD-FTV platform.

PRICE \$7,980 (PAIR)

Key Features

The VDDT-G450 Titanium features our 6AL4V titanium compressor wheel, offering unmatched fatigue resistance, exceptional strength, and superior balance retention under long-term load. It also resists damage from foreign object impact, making it ideal for harsh off-road and high-performance environments.

Each unit features anti-surge slots in a revised compressor cover to eliminate the surge issues found in the factory turbos around 22psi, enabling aggressive tuning with confidence.

A 4340 chromoly high-flow turbine and our High Flow VNT system work together to improve boost response and flow at high RPM, while the upgraded thrust and main bearings ensure durability under sustained load.

Performance Expectations

The VDTT-G450 Titanium delivers efficient boost from 16–43psi. When tuned correctly with supporting mods, customers can expect up to 30psi by 1850rpm, 43psi from 2000rpm to 3100rpm and maximum 35psi at 4000rpm

Product	Torque (Nm)	Power (rwkW)
Stock VDJ200 Series	550	155
VDTT-G450Ti + remap	850-900	230-240
VDTT-G450Ti + supporting mods*	1200	365

*Supporting Mods = GTurbo Airbox, intercooler or GTurbo fan kit, 3" exhaust, high-flow injectors

Note: These performance figures are based on a turbo-back exhaust system. Retaining the DPF will slightly reduce output.

The dyno graph below, reflects real-world performance of the VDTT-G450 Titanium on a VDJ200 Series Landcruiser.

\$4890

HIGH-FLOW AIRBOX

VDJ200 SERIES LANDCRUISER

DURABLE | LIGHT-WEIGHT | DROP-IN FIT

GTurbo's high-performance airboxes are engineered for maximum airflow, strength, and durability to complement our turbo systems. Designed for harsh conditions, they deliver consistent performance, reliable filtration, and the long-term protection needed for high-power builds.

PRICE \$1495

Features

Our GTurbo High-Flow Airbox features a market-first double-seal system for superior dust and water protection in the harshest conditions. Built from 3mm alloy with 8mm flanges and finished in corrosion-resistant anodizing, it delivers strength, durability, and long-term reliability.

Designed as a direct OEM replacement, it uses factory mounting points and retains OEM filter compatibility for easy servicing. Unlike plastic factory units that flex and leak under load, GTurbo's alloy design ensures clean, cool, and unrestricted airflow, improving engine performance and providing consistent protection for towing, touring, and serious off-road use.

Why its needed

High-performance turbos demand more air than the factory airbox can deliver. Stock units can become a major restriction, reducing power and efficiency.

FAN KIT UPGRADE

VDJ200 SERIES LANDCRUISER

EXCELLENT DRIVEABILITY | RELIABLE | STRONG

The GTurbo Intercooler Fan Kit is designed to keep intake temperatures under control when airflow is limited, such as slow-speed climbs, towing, or tough off-road conditions. By actively pulling cool air through your intercooler, this upgrade ensures consistent performance, improved efficiency, and safer EGTs.

PRICE \$1895

Features

Our GTurbo Fan Kit mounts directly to the factory top-mount intercooler to help combat heat soak, a common issue where the intercooler absorbs heat from the engine and engine bay. By actively drawing air through the intercooler when temperatures rise, this kit significantly improves charge air cooling without the need to cut or modify the vehicle.

Our fan kit wires neatly into the engine bay's fuse box and installs cleanly without interfering with factory components. It is ideal for setups where space behind the grille is limited due to accessories like winches, lights, or transmission coolers.

Why it's needed

At low speeds or under heavy load, airflow over the intercooler drops, causing intake temps and EGTs to rise. The GTurbo Fan Kit solves this by maintaining consistent cooling, preventing heat soak, and ensuring your engine performs safely and efficiently in the toughest conditions.

FM INTERCOOLER

VDJ200 PDI INTERCOOLER KIT

UNMATCHED COOLING | EFFICIENT | SEAMLESS

The PDI Front Mount Intercooler Kit for the 200 Series LandCruiser is the ultimate cooling upgrade for the VDJ200 platform. Engineered to deliver exceptional intake temperature control under heavy loads, it's a bolt-on solution that fits behind any bullbar and winch combo, and no cutting is required.

PRICING FROM **\$2595**

Features

The PDI front-mount intercooler is a significant upgrade over the factory top-mount, dramatically reducing intake temps, even under full load, with test results showing as low as 47°C. Its 76mm-thick core sits tight against the radiator for maximum airflow from the engine fan, ensuring reliable cooling in low-speed and towing conditions.

Built for performance and durability, the kit includes stainless steel piping, 5-ply silicone joiners, USA-made Breeze clamps, and updated mounting hardware.

Choose from two core sizes:

1. The Mk2 Standard (610x320x76mm) for maximum cooling or
2. The Mk2 Slimline (610x285x76mm) for improved clearance with bull bars and winches.

An optional heavy-duty transmission cooler is also available for high-load applications.

Why is it needed?

Toyota's factory top-mount intercooler is adequate for stock performance, but it quickly becomes a bottleneck when boost and fuel are increased. Rising intake temps lead to higher EGTs, reduced torque, and inconsistent power, especially at low speeds, off-road, or when towing.

By comparison, PDI's front-mount retains full airflow at idle and low road speeds, maintaining torque delivery when it matters most. Heat soak from the engine bay is virtually eliminated, and airflow across the core increases linearly with road speed and fan draw.

Optional Add-Ons

Heavy-Duty Transmission Cooler

Built to suit touring and towing applications, this cooler mounts directly behind the grille for priority airflow and includes a winch/bull bar-compatible bracket.

OPTIONAL
UPGRADE **\$520**

Thermo Fan Mounting Tabs

All intercoolers include provisions for a SPAL VA10-AP10/C-61S 12V fan on the cold side. This maintains airflow across the condenser in stop-start traffic or slow-speed conditions.

OPTIONAL
UPGRADE **No Extra Cost**

Single Entry vs Dual Entry Cold Side Options

PDI offers both configurations, depending on your build:

Dual Entry: Maintains factory EGR and twin throttle valves for soft shutdown and emissions compliance

Single Entry: Deletes EGR and butterflies, simplifies piping, improves throttle response, and suits high-output builds. A custom bracket allows the disconnected throttle valves to be safely mounted out of the way.

OPTIONAL
UPGRADE **No Extra Cost**

HIGH-FLOW INJECTORS

GTurbo +95% & Pro 100 INJECTORS

PRECISION-FLOW | INTEGRATED | RELIABLE

GTurbo have developed its own high flow injector range, which are designed for seamless integration with GTurbo systems. These injectors deliver precise fuel delivery for stronger throttle response, increased torque, and big-power capability across both pre-DPF and DPF VDJ200 Series Landcruisers.

Why upgrade Injectors?

Larger injectors reduce the workload on your injection system. By delivering more fuel at lower rail pressures, they help take the strain off your injector pump while improving atomisation and combustion under load. Whether you're chasing more torque, better fuel delivery under boost, or future-proofing your build for power goals, high-flow injectors are a key part of the puzzle.

GTurbo offers two levels of high-flow injectors designed to suit a range of performance goals. These injectors are proven to support builds making 400+whp and 1000+Nm at the wheels, but they're just as effective in mild applications. Don't be put off by the potential, they're completely ECU-controlled, and your tuner can adjust them to suit any target, even as low as 200whp and 550Nm, if desired.

What we offer?

We offer two levels of high-flow injectors:

+95% Injectors only for **pre-DPF** VDJ200 series.

Pro 100 Injectors only for **DPF-equipped** VDJ200 series.

Purchase Options

PURCHASE OPTION	PURPOSE	+95% Injectors (Pre-DPF ONLY)	Pro 100 Injectors (DPF ONLY)
Nozzle Kits Only	Ideal for customers working with local fuel shops	\$1190	\$2790
Exchange Injectors	Refurbished injectors, professionally modified and high-flowed. Sold on an exchange basis (see below)	\$2500	NOT AVAILABLE
Genuine New High-Flow Injectors	New Toyota Injectors professionally modified and high-flowed by GTurbo	\$5890	\$11,900
Service Upgrades	Customers send in their injectors for modification and flow upgrade.	\$2500	\$4890
Fitting Kits	Complete Kit with everything you need for an install: gaskets, seals and injector seats	\$320	\$190

GTurbo IVD-FTV Injector Exchange Program

GTurbo offers an exchange program for +95% injectors (pre-DPF). Injectors are supplied first on an exchange basis with a **\$300 refundable core charge**. The core charge is refunded once your original injectors are returned. The cores must be in working, serviceable condition for refund eligibility.

All injectors are fully flow-tested, matched, and ready to support your build.

POWER PACKAGES FOR THE 1VD-FTV PLATFORM

Performance Package Summary

Package	Description	Price*	
		Supply Only (No Tune)	Supply & Install (With Tune)
Starter Package	• GTurbo VDJ200 4" High-Flow Airbox • GTurbo Twin Fan Kit • Custom ECU & TCU Remap	\$3,390	\$6,080
Explorer Package	• GTurbo G380 Titan Twin Turbos • GTurbo VDJ200 4" High-Flow Airbox • GTurbo Twin Fan Kit • Custom ECU & TCU Remap	\$10,278	\$17,178
Adventurer Package	• GTurbo G380 Titan Twin Turbos • GTurbo High-Flow Injectors • GTurbo VDJ200 4" High-Flow Airbox • GTurbo Twin Fan Kit • Custom ECU & TCU Remap	Non – DPF Injectors	
		\$16,568	\$24,818
		DPF Injectors	
		\$21,780	\$29,880
Warrior Package	• GTurbo G450 Titanium Twin Turbos • GTurbo High-Flow Injectors • GTurbo 4" High-Flow Airbox • • GTurbo Twin Fan Kit • Custom ECU & TCU Remap	Non – DPF Injectors	
		\$17,976	\$27,276
		DPF Injectors	
		\$23,270	\$31,478

PACKAGE ONE

STAGE 1: STARTER PACKAGE

RESPONSIVENESS | PROTECTION | RELIABLE POWER

The Ultimate Starting Point for Your VDJ200 LandCruiser

GTurbo's VDJ200 Starter Package is the perfect first step to unlocking your twin-turbo LandCruiser's potential. By improving airflow, cooling, and reliability, it delivers a safe, noticeable performance gain while retaining factory-like drivability. With tuning, expect around 270 HP and 750 Nm — transforming your 200 Series into a smoother, more responsive performer for towing, touring, and daily use.

PRICING
FROM **\$3390**

What's included?

GTurbo VDJ200 4" High-Flow Airbox

Designed in-house and CNC machined for a perfect factory fit, the GTurbo High-Flow Airbox features our exclusive double-seal design for superior dust and water protection. Engineered to maximise airflow while retaining excellent filtration, it supports safe power gains and protects the engine in harsh touring and off-road environments.

GTurbo Twin Fan Kit

The GTurbo Twin Fan Kit stabilises intake and intercooler temperatures under sustained load. High-output fans increase airflow through the intercooler, maintaining consistent performance when towing, climbing, or driving in hot, slow off-road conditions.

Custom ECU & TCU Remap

Professional ECU and transmission recalibration optimises fuel delivery, boost control, and shift strategy. The result is stronger torque, improved throttle response, and smoother gear changes across the rev range, without compromising reliability.

Why Choose Package 1?

- Delivers a strong, safe power increase without opening the engine
- Improves throttle response and turbo spool-up
- Enhances towing performance and everyday drivability
- Increases airflow while protecting the engine from dust and water
- Helps control intake temps under sustained load
- Includes both engine and transmission tuning for seamless performance

Performance Gains:

Product	Torque (wNm)	Power (whp)
Stock VDJ200	550Nm	200hp
Package 1 (Starter Package)	750Nm	270hp

Note: Figures based on typical dyno results of VDJ200 vehicles with standard supporting setups. Results may vary slightly depending on vehicle condition, tyre size, and other modifications.

The dyno graph below, reflects real-world performance of a VDJ200 upgraded with a stage 1 performance package.

PACKAGE TWO

STAGE 2: EXPLORER PACKAGE

MORE POWER | COOLER RUNNING | HEAVY-DUTY TORQUE

The Explorer Upgrade for Your VDJ200 LandCruiser

GTurbo's VDJ200 Explorer Package is built for LandCruiser owners wanting a serious performance upgrade without sacrificing reliability or factory-like drivability. Featuring G380 Titan Twin Turbos, it delivers sharper response, improved thermal control, and strong all-round power. Once tuned, expect up to 300 HP and 850 Nm — turning your 200 Series into a refined, confident tourer and tow vehicle.

PRICING
FROM **\$10,278**

What's included?

In **addition** to all the Package 1 essentials (GTurbo VDJ200 Airbox, GTurbo Twin Fan Kit, Custom ECU & TCU Remap), Package 2 includes:

GTurbo G380 Titan Twin Turbos

High-flow billet compressor design provides faster spool-up, greater midrange torque, and exceptional top-end performance. Engineered as direct-fit replacements for factory turbos, the Titan-spec internals are built for long-term strength and reliability under increased boost.

VDJ200 Turbo Gasket Kit

A complete set of premium gaskets ensures a clean, leak-free turbo installation and long-term sealing reliability under increased boost and heat.

Why Choose Package 2?

- Delivers a major performance increase over Stage 1
- Faster turbo response with strong midrange pull
- Improves intercooler cooling under sustained load
- Enhances towing performance and overtaking power
- Maintains factory-like refinement and drivability
- Includes engine and transmission tuning for seamless performance

Performance Gains

Product	Torque (wNm)	Power (whp)
Stock VDJ200	550Nm	200hp
Package 2 (Explorer Package)	850Nm	300hp

Note: Figures based on typical dyno results of VDJ200 vehicles with standard supporting setups. Results may vary slightly depending on vehicle condition, tyre size, and other modifications.

The dyno graph below, reflects real-world performance of a VDJ200 upgraded with a stage 2 performance package.

PACKAGE THREE

STAGE 3: ADVENTURER PACKAGE

HIGH POWER | FULL FUELING | SUSTAINED TORQUE

The Adventurer Upgrade for Your VDJ200 LandCruiser

GTurbo's VDJ200 Adventurer Package is built for serious LandCruiser owners chasing reliable high performance. Centred around the proven G380 Titan Twin Turbos with high-flow injectors and essential supporting upgrades, it delivers up to 400 HP and 1000 Nm when professionally tuned. Expect sharp turbo response, massive midrange torque, and smooth, controlled power for towing, touring, and performance driving.

PRICING
FROM **\$16,568**

What's included?

GTurbo High-Flow Injectors & Injector Fitting Kit

Injector type matched to your vehicle: Pro95 injectors for Pre-DPF models or Pro100 DPF-compatible injectors for DPF-equipped vehicles. Both options deliver clean, precise fueling and consistent atomisation to support high boost and major power gains.

In **addition** to all the Package 2 essentials:

GTurbo G380 Titan Twin Turbos

GTurbo VDJ200 Airbox

GTurbo Twin Fan Kit

Custom ECU and TCU Remap

1VD-FTV Rail Blank

VDJ200 Turbo Gasket Kit & Injector Fitting Kit

Why Choose Package 3?

- Major power and torque increase over Stage 2
- Full fueling support for high-boost twin-turbo performance
- Strong midrange pull ideal for towing and highway work
- Improved airflow and thermal control under sustained load
- Maintains drivability and long-term engine reliability
- Designed for serious touring and heavy-duty use

Performance Gains

Product	Torque (wNm)	Power (whp)
Stock VDJ200	550Nm	200hp
Package 3 (Adventurer Package)	1000Nm	400hp

Note: Figures based on typical dyno results of VDJ200 vehicles with standard supporting setups. Results may vary slightly depending on vehicle condition, tyre size, and other modifications.

The dyno graph below, reflects real-world performance of a VDJ200 upgraded with a stage 3 performance package.

VDJ200 Adventurer Package : Power(HP) & Torque(N-m) VS Engine Speed(RPM)

PACKAGE FOUR

STAGE 4: WARRIOR PACKAGE

MAXIMUM POWER | UNMATCHED DRIVEABILITY

The Warrior Upgrade for Your VDJ200 LandCruiser

GTurbo's VDJ200 Warrior Package is the ultimate single-stage upgrade for the twin-turbo 200 Series. Built for uncompromising power and reliability, it combines G450 Titanium Twin Turbos with high-flow fuel and airflow upgrades for sustained performance. Professionally tuned, it delivers up to 450 HP and 1100 Nm, with rapid response and relentless torque for towing, touring, and performance driving.

PRICING FROM \$17,976

What's included?

GTurbo G450 Titanium Twin Turbos

A massive high-flow upgrade featuring billet titanium compressor wheels for extreme durability, high-boost stability, and unmatched top-end performance. Designed to deliver exceptional airflow capacity while retaining GTurbo reliability.

In **addition** to all the Package 3 essentials:

Custom ECU & TCU Remap

GTurbo VDJ200 Airbox

IVD-FTV Rail Blank

GTurbo Twin Fan Kit

VDJ200 Turbo Gasket Kit

GTurbo Power Pipe

GTurbo High-Flow Injectors & Injector Fitting Kit

Why Choose Package 4?

- The highest-performing twin-turbo setup available for the VDJ200
- Massive torque increase for extreme towing and load carrying
- High-flow fueling to support reliable high-boost operation
- Improved airflow and intercooler efficiency under sustained load
- Designed for durability in harsh touring environments
- Maintains smooth drivability despite major power gains

Performance Gains

Product	Torque (wNm)	Power (whp)
Stock VDJ200	550Nm	200hp
Package 4 (Warrior Package)	1000Nm	450hp

Note: Figures based on typical dyno results of VDJ200 vehicles with standard supporting setups. Results may vary slightly depending on vehicle condition, tyre size, and other modifications.

The dyno graph below, reflects real-world performance of a VDJ200 upgraded with a stage 4 performance package.

CONSIDERATIONS FOR THE 1VD-FTV PLATFORM

Before Upgrading

Before upgrading your turbo, it's crucial to plan for the supporting modifications that make extra power safe and reliable. Relying on stock components can limit performance—or worse, lead to engine or driveline damage. Ensuring the right supporting mods will protect your investment and unlock the full potential of your GTurbo upgrade.

Supporting modifications

We have provided extensive information on preceding pages regarding supporting modifications. To summarise:

RECOMMENDED SUPPORTING MODIFICATIONS

- PDI Front-Mount Intercooler
or GTurbo Fan Kit
- Minimum 3" Exhaust
- Airbox
- High-Flow Injectors

Tuning

At GTurbo, we prioritise safe, reliable performance. The figures we publish reflect conservative, real-world results suited to long-term reliability. If you're aiming for more aggressive tuning, we can accommodate that, with the understanding that increased risk may be involved. We're here to guide you through the right setup based on your goals and how you use your vehicle.

Fueling

Factory IVD-FTV injectors become restrictive around 200–230 rwhkW and ~800 Nm at the wheels. To safely exceed this, we recommend +95% high-flow injectors (pre-DPF) or Pro 100 (DPF models), supporting 300+ rwhkW and 1000+ Nm.

Intake Manifold Cleaning

Over time, the EGR system causes oily soot buildup in the intake, restricting airflow and reducing performance. Most ageing vehicles benefit from a thorough intake clean to restore flow and efficiency.

Oil Filter Cartridge Insert – Don't Forget It

When servicing the VDJ200 IVD-FTV oil system, ensure the internal cartridge support pole in the filter housing is in place. This small insert prevents the filter from collapsing under pressure.

It's often removed with the old filter and forgotten. If not reinstalled, the new filter can collapse, causing oil starvation and catastrophic damage. Always double-check it's fitted before installing a new filter.

Injector Installation Caution

On pre-DPF IVD-FTV engines, injector installation must be done carefully, as poorly seated leak-off washers can allow diesel into the sump, raising oil levels and risking engine runaway. Torque injectors to 18Nm, ensure the leak-off rail is sealed, lightly oil the bolts, and check for leaks with compressed air. Monitor oil level for the first 1,000km to confirm no contamination.

Note: This does not apply to post-DPF IVD models, which use a different injector design.

Automatic Transmission Tuning

The VDJ200's AB60 6-speed automatic responds exceptionally well to tuning, with no need for valve body upgrades or shift kits.

At GTurbo, we recalibrate shift points, increase line pressure, and adjust torque reduction through the ECU—delivering firmer, faster shifts and improved drivability under load without the wear, harshness, or cost of mechanical upgrades.

MAP Sensor Filter Cracks

The plastic MAP sensor filter is a common failure point. Cracks or leaks in this filter can cause incorrect sensor readings, resulting in power loss or tuning issues. GTurbo offers a washable stainless steel replacement for \$99 that won't crack or degrade over time.

Secondary Fuel Filters

While adding a secondary fuel filter is a popular upgrade to protect the IVD-FTV from contaminated fuel, using the wrong filter can do more harm than good. Many aftermarket kits use a 5-micron element, which is far too restrictive for the factory common-rail injector pump to draw through on its own. This restriction causes the pump to struggle, leading to internal wear and metal contamination.

Over time, metal from the pump can circulate through the fuel system and even make its way back into the fuel tank, risking widespread damage. We strongly recommend using a 30-micron filter at a minimum for secondary filtration. If you plan to run anything finer, a quality lift pump is essential to relieve strain on the injector pump and maintain long-term reliability.

Always Remember

At GTurbo, we're passionate about helping you get the most out of your diesel performance journey. Whether you're chasing reliable towing power, building an off-road beast, or planning a high-performance upgrade, our team is here to guide you every step of the way. From choosing the right turbo to selecting supporting modifications and tuning solutions, we'll make sure your setup is safe, efficient, and delivers the results you're looking for. Got questions? Our expert support is only a call or email away. You can find our contact information on Page 43.

Philosophy

GTurbo turbos are designed to safely handle the boost levels we specify, while maintaining exceptional durability and performance. Our units are bolt-on replacements, connecting seamlessly to your existing manifold and exhaust for a straightforward upgrade.

At GTurbo, we prioritise safe, reliable performance. The figures we publish reflect conservative, real-world results suited to long-term reliability. If you're aiming for more aggressive tuning, we can accommodate that, with the understanding that increased risk may be involved. We're here to guide you through the right setup based on your goals and how you use your vehicle.

Warranty

Every GTurbo product comes with a 12-month warranty against manufacturing and assembly defects. This excludes our titanium models which are covered for 24-months under warranty.

We take pride in delivering world-class products that significantly enhance your vehicle's performance and in providing outstanding support to ensure the best possible GTurbo experience.

While we'll assist you wherever possible, please note that we cannot accept liability for issues caused by factors outside our control.
